Timberscan is the Only Enterprise Content Management System Designed Specifically for Sage 300 CRE

Any document or content important to your business is easily acquired. Documents can be saved as TIFF files, PDF or in their native format. For example Excel, Word, AutoCad drawing, pictures, video clips, email, or any other format can be saved and viewed in their format.

Native format documents can be edited so that the latest version is always available.

Acquire documents by scanning, drag & drop from emails or files. Certain documents can be directly imported from third party applications. For example checks created with Piracle or Print Boss.

Capture Module reads invoices and auto-fills data entry eliminating most of the invoice coding.

Timberscan offers complete control of what documents to store, how to index them and where they need to be routed for approval.

Timberscan comes with a powerful workflow engine so that you can define where documents need to be routed. With rules based routing, complex routing requirements can be defined easily.

Documents are stored in a secure data vault and are also available within Sage 300 CRE

Document and field level security ensures that only authorized personnel can see sensitive documents.

Powerful reports put your entire business at your fingertips

timberscan

Timberscan is the Leading ECM System for Sage 300 CRE with More Than 19,000 Users at Over 1,100 Companies

Timberscan is Renowned for Automating and Simplifying the A/P Approval Process. A/P data entry in Timberscan mirrors data entry in Sage utilizing the same data entry grid with the same look-ups and advanced functions such as Allocations and Joint Checks. Timberscan also provides the same warnings for insurance and compliance.

The Workflow Shown Below is One Most Commonly Used by Our Clients

- ◇ Invoices & supporting documents are acquired in Timberscan.
- ◇ Initial Coding does not require the completion of all data entry fields. Coding can be completed during approval.
- ◇ Your routing rules will automatically route invoices to the right approver(s). Automatic routing can be triggered by job, company, cost code, category, G/L account and many other values. Routing can also be done on the fly
- ◇ Final Review is an optional step that allows the accounting department to review invoices prior to posting to Sage 300 CRE
- ◇ Post directly into the Sage database. Posted invoices are in the A/P New File inside of Sage.
- ◇ The invoice and supporting document images are viewable in Sage by selecting the paper-clip at the invoice level.
- ◇ Timberscan creates a complete invoice packet which includes the invoice, approval page, all supporting documents and a copy of the check when cut.

Timberscan supports other A/P workflows. For clients using the P/O module there are a number of work-flows available. Here is one example.

- ◇ PO's are scanned and routed for approval in Timberscan
- ◇ Invoices are received in PO module and posted to Sage A/P
- ◇ Invoices are scanned in Timberscan
- ◇ Sage A/P Data is imported into Timberscan and easily matched to the invoice image
- ◇ If the invoice needs approval it goes through the routing process and once approved the image flows to Sage
- ◇ If invoice doesn't require approval then the images flow to Sage

CLIENT TESTIMONIALS

“The biggest reason we purchased TimberScan was to eliminate the large number of paper being shuffled all over the office. Because of TimberScan’s automated approval process it’s a snap... with no paperwork. We now get invoices back from our approvers three times as quick. Sometimes I have them back on the same day. Our President, who is the final approver, is really impressed with his ability to view supporting documents.”

Melissa Ferris | Accounting Manager
Fretz Construction

“We love TimberScan! The main reason we purchased TimberScan was the accessibility of invoices to everyone. From the project managers to the President everyone is experiencing increased efficiencies with the ability to quickly see scanned images. Our COO can monitor outstanding invoices and it’s a fantastic management tool. And at the end of the month, we know who’s holding us up. The purchase has paid for itself in 2 to 3 months. With other vendors, when you say something doesn’t work, nothing happens. With TimberScan, you get changes via support within a week. I have never seen this type of response from a software company.”

Mary Anderson | Chief Financial Officer
Hydro Construction Company

“We save a gargantuan amount of time with TimberScan! No more filing, no more searching for invoices. I never worry as I can find any invoice from my desk at any time in an instant. The few times we have needed support the response times have been quick! Our project managers wonder why we didn’t purchase TimberScan sooner. They value their time and are thrilled they no longer have to hunt down paper.”

Bob Scott | Controller
Thor Construction

“We needed the flexibility of having approvers working at multiple locations and couldn’t afford having paper traveling all over. TimberScan paperless routing solved that problem and gave us better control over the approval routing. It’s now so easy to see who had the invoice and how long they had it. Support is great. Calls are returned quickly and you feel that you are more than just a number.”

Mark Sistko | Controller
Rental Systems

SECURE, AFFORDABLE AND EASY TO USE

- ◇ Quick Payback – Reduces approval process by 50% or more. Eliminates numerous tasks and saves on paper, toner, storage fees, Express Mail fees and many other expenses.
- ◇ Does not require any additional licenses of Sage 300 CRE (Timberline)
- ◇ Runs on the Microsoft SQL database platform and ships with SQL Express
- ◇ Works with Citrix and Terminal Server for remote users
- ◇ Easy Implementation – Works like Sage 300 CRE. Most clients are up and running within a few days.

*You have to see
TimberScan to truly
appreciate its power
and flexibility.*
