

Integrator - Exchange project data between Meridian Prolog Manager and Sage Timberline Office

Two powerful industry standards brought together: Prolog Manager and Sage Timberline Office. Event 1 Software's Integrator is the Meridian Project Systems authorized DataBridge for Sage Timberline Office. Integrator was developed by Event 1 Software, Inc., an authorized Sage Development Partner in partnership with select Meridian Project Systems customers. This is an application designed and built to meet your financial data integration needs. Integrator eliminates dual entry and worry by seamlessly integrating your Sage Timberline Office financial information with Prolog Manager's robust cost control module. This tool saves you time and enables complete cost-to-date reporting!

Integrated Data

With Integrator you can exchange the following types of data in the direction shown:

Sage Timberline Office	Direction	Meridian Prolog Manager
Vendors		Companies
Extras, Cost Codes, Categories		Budget Codes, Budge Group Lookup Lists
Estimates		Budgets
Approved Estimate Changes		Budget Changes
Commitments (Purchase Orders)		Purchase Orders
Commitments (Subcontracts)		Contracts
Commitment COs		Subcontract COs
Costs <i>Actual or Billed</i>		General & Contract Invoices
AP Invoices		General & Contract Invoices

Licensing

Integrator is licensed according to the specific types of data that you wish to exchange. In this way, you have a wide variety of options available but you only need to pay for the options that you plan to use. Each arrow in the list above represents a licensed feature.

Features

Feature	Description
Connectivity	Clearly one of Event 1 Software’s signature traits is the ease with which products connect to Sage Timberline Office or SQL databases. Integrator makes use of proven techniques and components to make the connection to your Sage Timberline Office or Prolog Manager database easy. The connection to your Sage Timberline Office database is made via the ODBC driver for Sage Timberline Office and there is no need on your part to perform any special configuration. Event 1 Software’s ODBC connectivity takes care of it for you! On the Prolog Manager end, Integrator makes use of the Meridian Application Integration SDK (Software Developer Kit). The SDK allows Integrator to access your Prolog Manager database while the SDK enforcing business and database rules.
Wizard Driven	When there is a setup or workflow task to accomplish that may involve multiple steps, an Integrator wizard guides you through the necessary steps.
Easy Workflow	The workflow process for integration consists of three steps. These three steps may also be combined into a single operation if desired.
Reports	After the “Determine Modifications” and “Perform Modifications” steps of the workflow process, Integrator produces a recap of the task. This provides a list of the data that was added or changed as well as any related warning messages or rejections. All reports are produced in an easy-to-navigate HTML format that can be saved, retrieved, and printed.
Flexible Mappings	<p>Sage Timberline Office Job Cost and Prolog Manager each provide a different set of options for defining the work breakdown structure (WBS) of a job. Integrator overcomes this by providing a “WBS Relationship Wizard” that guides you through the setup of a mapping between the two structures.</p> <p>Other user-defined mappings include company/vendor types, address types, contacts, contract/commitment types, contract/commitment dates and subcontract CO/commitment CO dates.</p>
Flexible Settings	The user-defined settings for each interface give you control over how data will be exchanged and when.
Substitution Tables	<p>Substitution Tables allow you to define sets of Sage Timberline Office/Prolog values that can be used to translate dissimilar values. Substitution tables can be created for:</p> <ul style="list-style-type: none"> • Company & Vendor IDs • Project & Job Numbers • Budget Codes & Cost Codes/Categories • Contract & Commitment IDs <p>Each type of substitution table is licensed separately allowing you to purchase only the level of functionality that you need.</p>
Unattended Operation	Integration tasks can be executed via a command-line, batch file or scheduled task using the Integrator Tasks application (included).

System Requirements

Required Software	Support Versions
Microsoft Windows	<ul style="list-style-type: none">• Windows 2008 Server, 32-bit or 64-bit.• Windows 7, 32-bit or 64-bit.• Windows Vista, 32-bit or 64-bit.• Windows 2003 Server, 32-bit or 64-bit.• Windows XP.
Sage Timberline Office	<ul style="list-style-type: none">• Versions 8.0 through 9.8
Meridian Prolog Manager	<ul style="list-style-type: none">• Versions 7.0 through 2008 R1 SP2, Prolog 9• Note – Support for Prolog 9 requires Integrator 2.90 or higher
Microsoft SQL Server or SQL Express	<ul style="list-style-type: none">• Version 2000, 2005, 2008, or 2008 R2
