To Final Form

From Blank Form

PrintBoss - Print with Quality and Security!

Print more than checks:
Invoices, Statements, Purchase
Orders on blank paper

Save Money
Reduce forms costs by 80%
or more!

Check printing made easy and secure...

Print Checks:

Feature	Benefit
Print checks on blank check stock	Only purchase one check stock to print checks for multiple companies or multiple bank accounts.
Seamless integration with accounting software	No additional keystrokes are required to print a document. All documents are printed using the standard keystrokes from within the host accounting package.
Print security verified signatures	Signatures can be printed on any check. Signature printing can be conditional based on the amount of the check or the bank account used. Either a password or a diskette makes the signature secure.
Check copies can be printed in any order	When printing check copies, they can be printed in an order that is consistent with how they will be used or filed. (The Customer File copy can print in Customer order, the Accounting File copy can print in check number order or invoice number order, etc.)
A compressed copy of check and advice at the top of the check form	When checks are printed, the top 4-inch section of the page can be printed with a compressed copy of both the check and the advice. This compressed copy can be detached (it is perforated) and kept as a copy. This is in addition to full page copies that are also available.

Print Other Accounting Forms:

Feature	Benefit
Never order accounting forms again	Invoices, Purchase Orders, etc. will all print on blank paper including additional copies of a form. (e.g. Customer Copy, Accounting Copy, etc) This feature virtually eliminates the cost of multiple part forms.
Wellspring Software blue fade invoice paper	Invoices and other accounting documents can be printed on this stock to create a more professional looking document.
Customize forms	The end user has the ability to create or modify a PrintBoss form to create unique accounting documents for different companies.
Email Documents	Send original documents or document copies via email.

Check Stock – Security Features

- ✓ Toner Grip Paper All Wellspring Software check stock is Toner Grip paper because writing a check should never expose your money to easy fraud. Toner Grip paper chemically bonds the last toner to the paper so that any modification of characters printed on the paper requires the actual paper fibers to be ripped away. This feature combined with the background patterns printed on the check stock make any attempt to alter information printed on a check much more noticeable.
- ✓ VOID Pantograph If the check is copied the word VOID appears many times on the face of the copy.
- ✓ Rainbow Background A special printing process is required to produce the two color background. This background is very difficult to copy using a color copy machine.
- ✓ Micro Printing The line creating the border of the check is actually printed words: "Wellspring Software". This printing is too small to be copied on a photo copy machine and it is referenced on the front of the check with a security feature warning message.
- ✓ True Watermark Each sheet of our high-security check-stock has a crosshatched watermark, which cannot be copied by a photocopy machine. Warning clauses are printed on the front and the back of the check that reference this feature.
- ✓ Florescent Fibers The check paper has florescent and visible fibers that are embedded into the paper. Holding the paper under an ultraviolet light will cause the fibers to glow. Warning clauses for this feature are printed on the face of the check.
